Better Work Environment - More Competitive

Exhaust gasses from diesel engines contain dangerous gasses and particles that contribute to poor a work environment, affect health and add to the air pollution.

That is why major cities such as **London and Berlin** are now tightening demands to off-road machinery on the city's building sites over and

above what is already legally required. This development will undoubtedly spread also to other major city areas.

A clean exhaust is therefore an important environmental and economic sales point which may be a challenge for owners of older equipment that may not be allowed in certain projects.

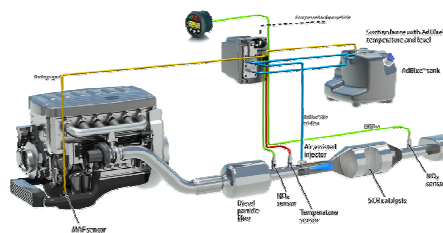

Retrofitting a particle filter or a catalyst from EMICON SYSTEMS is an easy and economic way to upgrade older machines, and increase their flexibility and value.

Contact us for a competitive offer to upgrade your vehicles.

NEW! – NOx Reduction

EMICON SYSTEMS now offer SCR catalysts and dosing systems that will reduce emissions of NOx from both on- and off-road vehicles and machines.

With these systems the Euro 6, Stage IV and Tier 4 (USA) standards can be met.

Special Offer

from
£ 20.85
 per liter

Emicon Systems offers a good alternative to Pirelli's Fuel Borne Catalyst additive.

Satacen® 315 from £ 20.85 per liter (at 10x5 liter canisters)
