PARTICULATE FILTER OF THE FUTURE

The latest generation of Particulate filters from
EMICON-Systems A/S

VOLVO FH TRACTOR

The modular design offers following advantages:

- **Plug and drive** - Quick and easy to mount.
- Several active/passive regeneration methods ensure regeneration (removal of soot particles) at all driving patterns. No fouling of the filter – high reliability.
- Provisions made for the future. Several upgrading possibilities, e.g. catalytic converter.
- Servicefriendly. Quick filter service.
- We use Silicon carbide, the most sustainable filter core in the market.
- Reduction of toxic gasses CO, HC, NO/NO₂, og NO_x is possible simultaneously with the filtering of soot particles.
- Superior filtration efficiency of 99,8% of Particulate matters.
- Endorsed in principle by the Danish Transportation Authority – your access to the eco zones.
- Engine size from 12-16L.
